

JAIRO RESTREPO RIVERA

A scanning electron micrograph (SEM) showing a dense network of interconnected, porous, and irregularly shaped particles, characteristic of biochar. The particles vary in size and shape, with some appearing as large, rounded, and highly porous structures, while others are smaller and more elongated. The overall structure is highly textured and interconnected, forming a complex, porous network. The word "BIOCHAR" is overlaid in large, bold, yellow capital letters in the center of the image.
